## Sensor

#### KITAS 2171-0x

The intelligent KITAS sensors form a new generation of speed sensors. With the innovative crypto-graphical IC the gear-box signals can be transmitted tamper-proof without an armoured cable for the first time.

A statically operated hall-effect IC is utilised as the sensor. This element converts the revolution of an impulse- or gearwheel into electrical signals. In parallel to the encrypted revolution data the conventional real-time signal is also available. Through a comparison of these two sources the tachograph can detect data manipulations safely. Therefore the KITAS sensor and the tachograph form an authorised system.

A link between the serial numbers of the KITAS sensor and the tachograph enchances the security even further.

#### Features

- Conform with Regulation VO (EG) No. 1360/2002
- Certificate through BSI according to ITSEC, level E 3 High, as per supplement 1B
- Full fills the Generic Security Targets as per supplement 1B
- Mechanical input
- Static measuring (Hall-IC)
- Data security by cryptological procedure (TRIPLES DES)
- Sealing possibility
- Replace the steel armoured cable
- Interface according to ISO 16844-3
- Standard plug according to ISO 15170
- Comparison of the real-time signal with the encoded signal
- Power-On reset function
- Storage of additional facts (identification, installation)

#### Use

• Only for use in the new tachograph generation MTCO 1324 (Modular Tachograph) and DTCO 1381 (Digital Tachograph)

# Sensor
